

Oil Spill Solutions

Small, medium and large scale solutions

Small, medium and disaster spill kits to manage all forms of oil contamination in an eco-friendly manner.

Over a 15 year period a proprietary range of products and methodologies have been developed specifically to manage oil spills within the workplace and environment.

Be Prepared for Accidents & Disasters

Handling problems as soon as they happen can reduce the impact of a spill significantly. Ensuring you have the right tools and products for the job close at hand is key to that. Don't be caught unprepared, implement your spill procedures now and it could save a huge cost, preventing downtime and environmental issues.

Workplace Spills

Small, medium and large kits to ensure fast and effective response to spills around the workplace. Our spill kits are designed to deal with any spill and we offer bespoke and tailor made spill kits as well as refill packs for all our spill kits.

Truck & Vehicle Spills

Our Vehicle Spill Kits store under or behind your driver's seat. A first line of defense on spills. When used correctly, this compact kit has everything you need for containment and provides for a quick response on the road.

Environmental & Marine Spills

Managing spills, river and soil contamination on a large scale takes precise planning and knowledge of the most environmentally friendly products in the market. Many of our unique products and services will enable effective and fast remediation.

About Us

- + Over 15 years of experience
- + Environmentally Acceptable Products
- + Readily Biodegradable (60% within 28 days)
- + Microbial - in the case of our powders and some of our liquids
- + Mostly water based (as opposed to solvent based)
- + ISO 9001 and ISO 14 000 compliant
- + Safe for human or animal contact

CUSTOM MADE KITS FOR ANY OIL SPILL EMERGENCY

Spill Kits

Our spill kits are available in any size you require, however, our two biggest sellers are for smaller spills where emergency kits need to be localised. The **Wheelie Bin Spill Kits** for factories, mines and industrial sites and our **Truck Spill Kits** to be kept in a vehicle in case of small spills. Keeping these kits local to any vehicle or hazard enables quick response to any spills that occur.

Oil Contamination & Spill Solutions

Oil spills should be cleaned up with immediate effect as the oil emulsifies. Emulsification means the oil mixes with water and the resulting oil/water mixture can take on a thick, pudding-like consistency and this is the oil pollution that we can see. Emulsified oil is extremely difficult to clean up by using stock standard means such as absorbents, dispersants, skimmers, etc. Oil pollution is toxic and harms the environment where it was spilled.

Eco-Marine is a world first, marine-life friendly crude-oil water-dispersant, approved by the South African Department of Environmental Affairs (DEA), the South African Maritime Safety Authority (SAMSA), the Council for Industrial & Scientific Research (CSIR), the South African Bureau of Standards (SABS) and is an international GREEN APPLE Environmental award winner.

EconoSweep is a powder for absorbing many times its own weight in spilt oil. It is a naturally biodegradable, non-leaching (once it absorbs the oil, it will stay absorbed and won't leak out), hard-surface absorbent. EconoSweep is engineered for the safe pick up and disposal of various oil spills in the engineering, mining, transport and other sensitive environments.

EcoTuff is an environmentally acceptable, water-based industrial strength cleaner/degreaser for most hydro-carbons (oils), hard-surfaces and general all-purpose cleaning. EcoTuff contains no solvents, acids, ammonia, caustic or paraffin. It is 100% biodegradable and environmentally friendly.

Booms and Pillows are used to stop the spread of oil spills on water and land and pillows are used for catching and absorbing falling/dripping oil. Our Booms and Pillows are hydrophobic which means they absorb oil and float on water. They are non-toxic, biodegradable, have a high absorbency level and can be incinerated.

Berms, Drip Trays & Pallets are placed underneath objects in order to contain spills for quick and easy containment. Oil drums can be placed on spill pallets or drip trays to help pre-empt leakage problems, or if a forklift is leaking oil, for instance, the berm is assembled underneath the leak.

Socially Responsible with Better Results and Significant Savings

"Green Cleaners" are replacing much harsher solvents and the cleaning result is much more effective than with conventional products. While changing your cleaning products to more effective and environmentally safe solutions, there are certain areas that should be given extra safety and cleaning precautions in order to ensure you are working to your maximum efficiency as well as not over spending on products.

ABOUT US

- + ISO9001 & ISO14 000 compliant
- + Over 15 years of experience
- + Environmentally Acceptable
- + Readily Biodegradable
(60% within 28 days)
- + Microbial powders & some liquid
- + Mostly water-based solutions
non-harmful to the environment
- + Safe for human & animal contact

The size of the spill, response time of the clean-up crew and the weather conditions are all mitigating factors when deciding on the containment of a specific spill.
